

CALLAWAY DIABLO OCTANE, RAZR and LR550 (MADE BY NIKON) INSTRUCTIONS

The Diablo Octane (6.5 oz) is the newest iteration of the previous models Callaway LR550 and the Callaway Razer all made by Nikon and all have the same body configuration. None of these laser rangefinders have a standard tripod socket as do all of the Bushnell lasers. So with your Quick Clip, we include three (two spares) of our belt clip hook (see picture below) with a 3M VHB (Very High Bond) adhesive disk attached. Above is a picture of the Diablo Octane and on it we've inserted a white circle where you need to carefully place the belt clip hook.

1. Using the included alcohol cleaning pad, clean the spot on your RAZR / LR550 / Callaway Diablo Octane and allow to completely air dry. This removes any oils, sweat, grease and other yucky stuff so the adhesion is optimized.
2. Peel the paper backing off of one of the belt clip tab/3M adhesive disk assemblies.
3. Carefully place the belt clip hook on the white spot as shown in the above picture.
CAUTION: The belt clip hook will want to stick immediately to whatever it touches so use care when placing it on the spot.
4. Apply some pressure on the belt clip hook for 25-30 seconds.
5. Allow it to "set" for at least 24 to 48 hours before using your rangefinder on the Quick Clip as this also enhances the adhesion.

VERY IMPORTANT: If you follow the directions "to the letter", it will stick instantly and you won't be able to remove it using your fingers/hands (you may draw blood). It certainly cannot come off during your everyday use on the golf cart.
